A Novel Approach to Union Busting

WP
Modestly Proposing?

Running a small business is hard. In today's world full of soulless corporations, it is inspiring to see hard-working American families succeed in honest business ventures like buying out the competition and passing the result down to their children. Unfortunately, the world is often cruel to those with pure intentions. Recent events regarding a certain Pittsburgh newspaper owned by a certain set of twin brothers from Ohio have only served to emphasize this.

The US Supreme Court, in an affront to the enterprising American spirit, had ruled in favor of ungrateful striking journalists, forcing the owners to negotiate with terrorists (union leaders) and, among other things, provide them with better health insurance. Choosing death over dishonor, the owners of the Pittsburgh Post-Gazette chose to put it out of its misery.

There are times when standing in the face of grievous injustice makes us want to turn our heads away in shame and despair. It is at those moments when it is most important to overcome those feelings and channel them into preventing something like this from happening again. As an American entrepreneur myself, I feel deep inside my heart that I can do just that. I have developed a business idea, modeled around a service that would have

saved the Post-Gazette: beating journalists with steel pipes.

The beauty of my plan is in its simplicity. Negotiating back-and-forth regarding union contracts and health insurance policies is time-consuming, expensive, and boring. Beating journalists with a steel pipe is efficient, fun, and a good workout. The steel of the steel pipes is a homage to Pittsburgh's industrial background, a reference that is obvious to both normal people and the literary types I will be thwacking. Home Depot has several for sale currently; although I favor the $\frac{1}{4}$ in. x 36 in. size, I am open to suggestions in the future. There is, undeniably, a classically American feel to this approach—speak softly and carry a big steel pipe.

In honor of the Pittsburgh Post-Gazette, I will be offering my first steel pipe beating free of charge to a newspaper company in need. The cost of subsequent beatings will be evaluated on a case-by-case basis. Give me a call! If your writers want health insurance so badly, give them a reason to need it. Hire me.

One of the most important things small business owners must learn is the importance of living in the moment. Things can get tough, but the human spirit is strong, and steel pipes are even stronger. Life is too short to spend it arguing with people, or caring about their opinions—live in the moment, and let me beat them instead.

Bored? Single? Looking for love at Carnegie Mellon? Forget that, come write satire for readme! No experience required or requested. We're always looking for clowns, funny guys, smart-alecks, layout artists, and . pictures of Spider-Man

We're looking for you and your skills, or lack thereof, Saturdays at 5 in DH1211

This issue of readme is brought to you by:

Pittsburgh Post-Gazette takes inspiration from Andrew Carnegie

Gilgamesh Ichthyomorphosis
Labor Law Loophole Lecturer

Steel mills, newspapers, and Carnegie Mellon Architecture: what do these all have in common? They are all built on a foundation of Pittsburgh-based exploitative labor practices. Andrew Carnegie opened his first steel mill in 1875, and with it started Pittsburgh's cultural obsession with underpaying and overworking the labor force. With the foundation of Carnegie Institute of Technology in 1900, overworking spread from the steel mills to the classroom. Carnegie's famous quote, "my heart is in the work," has been taken quite literally, with Celsius-sponsored heart attacks now driving school production 126 years later.

Carnegie also had indirect influence – after embedding a toxic working culture deep into the roots of Pittsburgh (fun fact: the Pittsburgh water not only contains 5% lead, but also 25% my-heart-is-in-the-work-ium), the Post Gazette dutifully carried the torch of labor violations forward.

Andrew Carnegie preferred a violent approach to union busting. His manager,

Henry Frick, hired Pinkertons to violently break strikes. This method, however, is quite old-fashioned (it was the 1800s, after all). The Post Gazette has taken a more modern approach to Carnegie's legacy, and simply decided to shut down. This kind of union-busting innovation is what keeps Pittsburgh a forward-thinking and modern city.

While Readme doesn't have a union, we do have a contingency plan for this kind of emergency. In the event that the staff ever tries to unionize (why would they, it's so fun to work here), we will immediately turn this fine magazine's publishing over to The Tartan. We are extremely confident that working for The Tartan will be so demoralizing that our staff will understand that no union will ever be worth working there.

We live in scary and unprecedented times, where staff can choose to unionize on a whim. However, due to our predecessors' forward thinking and the fine engineering skills taught to us at our dear Carnegie Tech, we hope to continue to advance Pittsburgh's storied tradition of union busting.

Reasons I Failed My Dorm Check

1. Christmas tree I planted to grow for next year
2. Waft of 3d printer fumes that emerged when my RA entered
3. Fully functional casino still running in my absence
4. The sh h r i n e (damn candles)
5. Gaping hole left by the AC unit that fell out of my window (oops)
6. Hoverboard
7. Six gallon lobster aquarium
8. Lack of the wall we demolished to transform our double into a quadruple
9. Trained attack rats I keep in my closet
10. Roommate's portal to hell

5-Hour Transgender

Allyn
Snorting EEN

From the brand that brought you the iconic energy shot, our labs have produced something entirely new: the pocket-size bottle that changes your gender, 5-Hour Transgender. Say goodbye to those long, tiring study sessions where daydreaming about having boobs distracts you from your calculus. Kiss goodbye to those groggy 8 AMs where you wish there was a little something stiff in your pants to wish you a good morning. With 5-Hour Transgender, your birth certificate is no barrier to presenting as any gender you choose for a short amount of time, without the cost and complications of traditional

transness.

5-Hour Transgender is available in three variants: feminine, masculine, and androgynous. Our quick-acting formula transforms not only your blood chemistry, but also your brain, your tissue structure, and your reproductive organs. Bring tape! Each variant is sold in multiple palatable, sugar-free flavors. Our masculine variant is available in black coffee, blueberry, or gunmetal, while our feminine variant comes in delicate flavors like strawberry, rose hips, or ambiguous blue liquid. Want to give androgyny a try? We offer vanilla, coconut shea butter, or infected piercing.

A disclaimer on the back of the packaging covers most bases, but be sure not to use

the product when going through airport security, as TSA agents may not know which location on your body to grope. Additionally, avoid making serious changes to your body while under the influence of 5-Hour Transgender. Upon expiration of the five hour half life, some aspects of the bottled gender may carry over, which doctors describe as "rad" or potentially "arousing."

As this product hits the markets, mark your calendars for the release of further inventions from 5-Hour Brands. Hitting the shelves soon, we've got 5-Hour Autism, 5-Hour Suffocating Dread, and most exciting of all, 5-Hour Power of Attorney (win back an afternoon with the kids!).

Pittsburgh GrubHub Driver Diaries

Iman Imigran

Taxi Driver would be better if he did Uber Eats

Day 1:

Hello, diary! Today is my first day driving for GrubHub! To be honest, I didn't really know what to expect, since I'm so new to the area and haven't really spoken to anyone yet. For that reason, I wanted to stay more downtown so I'd have more options in case some delivery got botched.

However, it was a really great time! Most of my orders came from University of Pittsburgh students, who were all really sweet. Everybody around that university just radiated positivity and kindness, and were super understanding whenever I faced traffic. One girl even gave me a bunch of flowers - lavender, my favorite! Every delivery was done by car, but honestly, I could have biked around and just spent a bit more time outside among the people.

I drove home with a huge smile on my face, and I'm smiling now just thinking about it as I write this entry. Today was a great day, and I hope that tomorrow can be even better!

Day 2:

Fuck this shit. Decided to sit around that Carnegie Mellon school for a bit, since I heard the kids were rich and thought they might tip a bit extra. Worst mistake of my life.

It was pouring rain outside, and some little bastard ordered fourteen pizzas to be delivered in the middle of the big lawn on campus. After picking up the pizzas, I parked my Buick Century in the bus stop and hauled ass through the mud to keep the quadruple-meat Chicago deep dishes from getting soggy. When I walked onto the sidewalk, my phone started to buzz, and it was the student who placed the order, so naturally I had to hold all of the pizzas in one hand to fumble around in my pockets before picking up the call.

As my finger slid towards the "Answer" button, I saw a small hinge start to creak in the corner of my eye. Before I could react, a trapdoor opened in the concrete walkway beneath me, and I tumbled into a massive pit, falling through the air before landing roughly in a large pile of pizza boxes and delivery-driver-shaped-skeletons. On the rock wall, written in pizza sauce, were the words "you took too long! 1 star!" with small metal stairs spiraling back up to the trapdoor. With rain still pouring down.

It took me ALL DAY to walk back up, and when I finally got back to the surface, I almost got trampled by a bunch of kids stepping over the trapdoor. Not only did nobody offer to help, but my car got towed, and nobody at the bus stop uttered a word when I asked for help. Needless to say, I quit. Assholes.

Untapped Niches in the U.S. Consumer Market

Citron

Entrepreneurial

Dear reader, I have devoted countless hours over the course of years to rear these ideas; at this point, it is as if they were my children, as if I were giving you my children, and these are some of the finest idea children ever to have been brain-born. Treat them with the reverence they deserve, and you shall be rewarded. When they make you buckets of money, I want half.

AI Doors

Doors are everywhere in modern life. So I find it a deplorable reflection of the sorry state of the "free market" that up till now, nobody has thought to implement modern LLMs into the door package. AI doors would feature sophisticated neural networks, yielding significant increases in their efficiency and output and revolutionizing the role of the door in the daily life of a North American.

Jellyfish NFTs

Ever wonder why NFTs are always monkeys? I have. Monkeys suck. They're like humans, except if humans were smellier and poopier and fartier and had those ugly ass monkey noses. Introducing: jellyfish NFTs. NFTs centered around Gaia's triumph: the peak of evolution, the ultimate lifeform. A far more sexy and erotic form of currency than any previously put into circulation.

AI Air Fryer

This innovation will bring the antiquated concept of an "air" "fryer" back into the spotlight of contemporary culture with AI integration, allowing for simplified strategic decision making and streamlined user experiences.

Lightsaber

schwing

Dog Vacuum Cleaner

Picking up dog poo. The little bag. It's gross. Sometimes you don't even feel like it, so you just kinda nudge it into someone's yard. We've all been there. The dog vacuum cleaner solves that issue; instead of picking up the poo with a

bag, you vacuum it. Sleek and postmodern. Plus bags are bad for the environment.

People consume about a credit card's worth of plastic every week. People don't consume a credit card's worth of vacuum cleaner every week. Just saying, you can be part of the problem or part of the solution.

Pasta with just cheese

It's like mac 'n' cheese, but without the mac, but with pasta, but hold the pasta, because it's just cheese, BABY! Any kind of pasta you like, any kind of cheese you like, with zero servings of pasta. It's like spaghetti with marinara—except with no marinara—except with cheese—except with no spaghetti. All the cheesy, good cheese pasta you want, with only cheese.

AI sombreros

Little sombrero hat buddy to accompany you on your journeys. And make delightful quips along the way. Hat puns likely. Examples: "You hat to see it!" "What now, cap-tain?" "Whoa, things are getting hairy!" "Let's hat-ch a plan!" AI powered. To generate new puns. Because I am all out.

Helicopter Plane

Helicopters can go high and fly in the sky because of their rotor blades. Planes also can do that too because of their wings. So why are vehicles restricted to one of these clearly very effective motion incurring devices each? The helicopter plane (or plopter, as I affectionately call it) is the next generation of aerial commute, featuring:

Wings
Rotors
Windows
Minigun

Dinosaurs

Everybody knows dinosaurs aren't real. They're just a myth parents tell their kids to get them to behave, like vegetable trolls, Santa Claus, or the IRS. But... What if they were? Imagine a world where you can ride a velociraptor around campus, or order GrubHub via pterodactyl, or maul your political adversaries to a brutal and visceral death with the help of your cherished pet spinosaurus, a parting gift from your late beloved grandmother. With modern technology, it's possible: Using the power of artificial intelligence, dinosaurs

New CMU rivalry chosen.

Your move,
Al-Shurooq School for Blind Children.

For all the people who decided to change their gender over break, here's a handy dandy spinner to pick a new name!//Alexandra Werth

Readme Reviews: Wake Up Dead Man

Rock Buddy
Chaste

Father Judd was working alone in his study, doing religious things, and sitting in a mahogany chair. Suddenly the door opens. He smiled, happy to see a familiar face. "Ah! Blanc, how can I help you?" "Well you see uh Fathuh, I was just perusing my local Barnes and Noble when I happened to go past a ratha interesting section." Judd had always admired Blanc's southern drawl, reminding of his boyhood obsession with cowboys and the south and ten-gallon hats. He loved ten- gallon hats, he even knew that they derived from the spanish phrase Tan Galan. "Oh yeah? What section?" replied Judd. "Well, I was looking past the boardgame section and saw shelves of those Japanese cartoon books." "Oh manga!" Judd responded.

"Uh yes, a man-ga." "Well in this here book section I stumbled upon a collection of books labeled Yaoi" Judd shuddered, remembering guilty teenage years. "This, here, uh Yaoi section had several a-interesting pictures. It seems to me to be principled upon male homosexual relationships." As he spoke, Blanc walked closer towards Judd. Judd felt his heart quicken and the room suddenly felt small and intimate. "Anyway, I am not a religious man, but from what I understand your church would consider that... rathuh heretical". Judd laughed nervously. "Well while some churches would consider homo-homosexuality" – Judd stuttered as Blanc stepped even closer, and crouched down to Judd's height.

"As I was saying, some down south point to verses like Leviticus 20:13 to vilify homosexuality, some, including this church believe that the verse was really referencing pedophilia." "Hm" Blanc said. His voice became softer and quieter as he drew his face close to Judd's and asked "But, what do you happen to think Fathuh? Can you appreciate the beauty in another man?"

Blanc put his hand on Judd's shoulder and Judd involuntarily shuddered. Judd suddenly stuttered, "I- I have to go" and tried to get up. While walking to the door, he tripped. Judd was about to faceplant but Blanc caught him. "Easy boy," Blanc said. Judd had his head directly on Blanc's warm chest. He could feel every deep breath in and out. He remained for a moment and then slowly stood up. His face was a few inches away from Blanc's. "I want to," whimpered Father Judd. "But I'm a priest, I can't betray God by violating my celibacy." Suddenly, the archangel Michael appeared in a bright flash of light before Blanc and Judd and told them that God was ok with Father Judd breaking his vows in this one scene. The two of them thanked him and he disappeared as soon as he came. Blanc pushed Father Judd against the wall. With his left hand he pinned Judd's hands above his head, and with his other began slowly undoing his shirt's buttons. "I'm not used to being this vulnerable," remarked Judd. "Don't worry Fathuh, you're safe with me."

To be Continued in rEadMe gets raunchy.

Post-Gazette shareholders introduce "flipped newspaper"

Allyn
Misinformed Disinformer

Underlying the closure of the Pittsburgh Post-Gazette is a deeper issue than the strike itself: news just isn't profitable anymore. It's a fundamental problem with the whole industry, one gnawing away at the foundations of the most credible institutions of yesteryear. With the rise of digital platforms that put the power to share information into the hands of everyday citizens, the bottleneck of a select few journalists to uncover and distribute truth is no longer a profitable point at which to rent-seek.

So what comes next? The board of the Pittsburgh Post-Gazette has some ideas. On Tuesday, they'll be voting on the most radical of the concepts proposed: turning the Gazette into a so-called "flipped newspaper." With this model, instead of the newspaper's staff curating news for the public to consume, the public itself will produce news, which the staff will consume.

"It cleanly solves the labor crisis underlying our business model," the paper's director of operations stated. "When our writers have to go out into the field, they're no longer under our direct supervision. When they go to political functions with notebooks and microphones, they create inconvenient conflicts between our profits and our accuracy, which is directly upstream of our coveted prestige. By shifting the role of the journalist from producing to consuming, from owning content to borrowing it, we take back control."

With this change would come a complete renovation of the Post-Gazette's offices. The facilities coordinator for the organization has a lot to say on the subject. "In a conventional newsroom, the staff sits facing inward, faces toward monitors and books. Their backs sit to the windows, almost as if they are projecting the knowledge of the outside world onto the page in front of them, on which their most direct focus lies. The product, the printed newspaper for outside consumption, is the root cause from which all impetus is derived. But when print news is outdated, and our flipped structure is introduced, this must be reversed."

"Instead, the staff will sit facing outward. We plan to combine adjacent floors to double their ceiling heights, and to convert the facade of our building to almost 100% glass, interrupted only by grand columns and curtains to frame the view of the outside world, reminding the viewers, our journalists, that it is from a higher place that they are observing, that they are in a sense, separated." The coordinator gave a faint smile.

"In the center of the rooms will be grand fountains and tables of books brought in from outside, anything to fill the inner space, such that lines of chairs and upholstery may line the bay windows. Consumption, of the outside, of what it produces, of what it is to the naked eye, will be not only passive, but unavoidable. This is the future of our industry; will you join us?"

Cervesato captured by Pres. Jahanian in nighttime operation

Allyn

Print Quota One-Percenter

Picture yourself this morning in section DDDD of 122. The topic is data structures, and Prof. Iliano Cerversato, known affectionately by his students as "Iliano" or "The Null Pointer", is giving a spirited talk on implementing frangible lists in C2. Suddenly, the door of Rashid is blown in with an air cannon. Formations dressed in solid tartan plaid rush the stage as a second attack group shatters the windows above to your right. Shots are fired, Honk dies in a cloud of stuffing. Iliano is rushed away, leaving a first-time TA in charge of the lecture, which continues on at its original pace.

This may sound impossible, but it's what transpired this morning as documented by the 122 TA rapid response forces. As the dust settled, it was clear only one man could have orchestrated this: President Farnam Jahanian of CMU.

Jahanian has not yet provided comment, but tensions between 122 and the University have always been high, spurred on by a valuable resource: print budget. It's no secret that SCS has one of the highest print budgets on campus, second only to CMU itself. Pundits have noted that the Jahanian administration has focused its attacks on SCS recently, but has tactfully avoided linking its rhetoric with contested resources, instead focusing on culture war and admissions issues. While the underlying motive was always obvious, few can say they anticipated such a crude escalation.

The coming days are unclear. President Jahanian is pushing to install his own professor in Iliano's place, which the 122 course staff states will be seen as a declaration of war. The faculty senate hasn't authorized the use of military force by a CMU President since the construction of Wean Hall (formerly Science Hall) in the 1960s; if Jahanian presses onward without this approval, calls for his resignation may intensify. Intense negotiation is likely ongoing, but the outcome remains to be seen.

Coming at you from Warner Hall, this is Allyn from readme, signing off.

Tired of Binge Drinking? Try Vibe Drinking

Vincent

Recovering from sobriety

Let me tell you about a CMU student named Bob. I actually don't know a person named Bob at CMU, but let's just say he's real. Like many other students at CMU, he has no friends, no girlfriend, no money, no sexual activity, no summer internship lined up, no loving parents, no prospect, no future, and he has been listening to AI Batman to help him overcome his chronic procrastination.

"So... now what?" asked Bob.

Well, you might jump to the obvious answer – Bob should start Binge Drinking. He gotta keep drinking until his problems seem to go away, till he forgets where he is or even who he is.

"Genius idea!" said Bob. "But binge drinking is just so much work."

Bob has raised a valid concern. Liquid intake, bathroom frequency, next-day cognitive impairment, and the social burden of convincing the liquor store cashier that he is not an alcoholic but simply hosting a very fun party are all legitimate physiological and

psychological stressors.

"No comment," said Doug, the liquor store cashier.

"It really sucks." Bob concluded. "Also, who the hell is that?"

Yes, Bob, binge drinking can be really labor intensive. But remember, we live in the age of AI. Your classmates haven't written their own code since 2024, why would you do the heavy lifting of binge drinking yourself?

"You are saying that I can be vibe drinking... just like vibe coding?" asked Bob.

Exactly!

"But it makes no sense, AI can't consume liquid."

Well, Bob, AI can't consume liquid, but AI can perform every other function of binge drinking.

"WTF?!"

Let me introduce VibeDrunk – a brand new AI agent brought to you by the CMU Learning & Optimization Lab (LOL).

VibeDrunk has the ability to access your electronic devices and simulate the online behaviors of an intoxicated

CRYPTID CORNER

PRESENTED BY:
ISABELLE FLORENCE

BAYSIDE MARKETPLACE ALIENS

Two years ago, extraterrestrial contact was made in Miami, Florida. What started as a brawl between customers in the Bayside Marketplace turned into the first verifiable contact humankind has made with aliens since the dawn of civilization. Security footage shows an eight-foot-tall grey alien arriving at the scene to engage in the classic American tradition, cheering on the fighters. One witness reported, "He was a real bitch. He put 30 bucks on orange T-shirt, then got all defensive when he lost." Since the incident, aliens just get beamed down every so often into the Bayside Marketplace Bath and Body Works. Conveniently, these aliens seem to love American name-brand products. Rigorous government testing¹ has shown that these aliens are extreme Coca-Cola® loyalists, would waterboard a prisoner of war for a McDowell® meal™, and only abduct children with Hershey® chocolate. Just last week, Disney CEO, Bob Iger, became the first person to make contact² with the aliens' High Empress. It's unclear exactly what agreement was reached, but now the aliens wear exclusively Disney merchandise. In other news, visitors to Disneyland have begun reporting symptoms remarkably similar to Havana Syndrome. Food for thought.

¹ Funded by Blackstone Inc.

² Funded by Blackstone Inc.

person, without requiring the user to ingest alcohol.

Normally, Bob requires six or seven drinks before texting his ex. With VibeDrunk, he requires ZERO. After activation, VibeDrunk will access Bob's iMessage history and send emotional incoherent messages such as: "Hey :)", "I was thinking", and "Nm".

If the ex calls back, VibeDrunk will answer using Bob's voice, reconstructed with proprietary slurring technology.

VibeDrunk also sends random short messages to Bob's parents between 2 a.m. and 5 a.m., such as: "I love you", "Thank you", and "Don't miss me". For user safety, VibeDrunk will block Bob from answering incoming calls after messages are sent.

And these are only a fraction of VibeDrunk's capabilities.

"Doesn't this take a long time to set up?" Bob asked. "Like learning my voice, my contacts—"

No setup is required. We already have all of your information.

"Where did you get it? And why does this sound so much like malware?"

Bob is just so full of questions, isn't he?

VibeDrunk is not malware. It is designed with user wellness in mind.

We are currently developing a premium feature that integrates with Tesla autopilot systems to simulate drunk driving behavior.

"WTF, that sounds extremely unsafe! Also, what happens when the cop pulls me over, can VibeDrunk do all the talking for me?"

Absolutely not, Bob.

"How much does this AI thing cost?" VibeDrunk is 100% free.

"Who is funding this?"

CMU LOL lab is proudly sponsored by the CIA, who provided the lab with all the necessary resources beyond just funding.

At this point, Bob is no longer needed and will be muted.

"NOOOOOO —"

Tired of drinking the old-fashioned way?

Try VibeDrunk today — because in the age of AI, even self-destruction should be automated.
